# Scotch-Weld<sup>™</sup> Low Odour Acrylic Adhesives DP8805NS Green

### **Product Data Sheet**

Date: March 2014 Supersedes: August 2013

#### **Product Description**

3M™ Scotch-Weld™ Low Odour Acrylic Adhesives are high performance, two-part acrylic adhesives with lower odour than most acrylic adhesives. These toughened products offer improved shear, peel, and impact performance. They also provide improved adhesion to many plastics and metals. These durable products feature an exceptionally fast rate of strength build, providing structural strength in minutes.

#### **Key Features**

- Toughened
- Work life of approximately 5 minutes
- Good shear strength
- Structural strength in about 9 minutes
- · High peel and impact strength
- 10:1 mix ratio
- · Increased cure speed with applied heat
- Contain glass beads (250µ diameter) to control bond line thickness

#### Note:

Unless otherwise indicated, all properties measured at 22℃.

#### **Physical Properties**

Property	DP8805NS Green		
Colour	Base (B) Accelerator (A)	Off-white Blue	
Viscosity <sup>1</sup>	Base (B) Accelerator (A)	90000 mPas 35000 mPas	
Density <sup>2</sup>	Base (B) Accelerator (A)	1.08 g/cm <sup>3</sup> 1.08 g/cm <sup>3</sup>	
Mix ratio	By volume By weight	10 Parts B : 1 Part A 10 Parts B : 1 Part A	
Note: Cure speed times are approximate and depend on adhesive temperature.			
Work life <sup>3</sup>		3-5 min	
Open time <sup>4</sup>		4-6 min	
Time to handling strength <sup>5</sup>		6-8 min	
Time to structural strength <sup>6</sup>		8-10 min	
Full cure time		24 hours	
Full cure time			

<sup>1.</sup> Viscosity measured using parallel plate viscometer; reported viscosity at 4 sec<sup>-1</sup> shear rate.

2. Density measured using pycnometer.

<sup>3.</sup>Maximum time that adhesive can remain in a static mixing nozzle and still be expelled without undue force on the applicator.

<sup>4.</sup>Maximum time allowed after applying adhesive to one substrate before bond must be closed and fixed in place.

<sup>5.</sup> Minimum time required to achieve 0,35 MPa of overlap shear strength.

<sup>6.</sup> Minimum time required to achieve 6,9 MPa of overlap shear strength.

#### Typical Mixed Physical Properties

# Property DP8805NS Green Colour Blue-Green Full cure time 24 hours Viscosity 90000 mPAs Density 1.08 g/cm<sup>3</sup>

## Typical Cured Physical Properties

#### Overlap Shear (MPa)<sup>7</sup>

Substrate	DP8805NS Green	
Aluminium	24.3 CF	
Stainless steel	23.0 CF	
PVC	12.5 SF	
ABS	8.3 SF	
Acrylic	6.9 SF	
Polycarbonate	5.9 CF	
Polystyrene	3.5 AF	
Polyester (fiber-reinforced)	4.9 AF	
Epoxy resin (fiber-reinforced)	20.8 CF	
Aluminium (tested at 82℃)	4.5 CF	

<sup>7.</sup> Overlap shear values measured using ASTM D1002; 1 min open time; adhesive allowed to cure for 24 hours at room temperature; 1/2" overlap; 0.010" bond line thickness; samples pulled at 0.1 in/min for metals and 2 in/min for plastics; all surfaces prepared with light abrasion and solvent clean; substrates used were 1/16" thick metals and 1/8" thick plastics; failure modes:

AF: adhesive failure CF: cohesive failure SF: substrate failure

Note: Environmental aging tests have shown that these adhesives may accelerate the corrosion of certain metals (such as bare steel, copper, brass, and bronze), leading to low bond strength values and early bond failure. These adhesives also have relatively low adhesion to low surface energy plastics (such as polypropylene, polyethylene, TPO, and PTFE). Applications involving any of these materials should be carefully evaluated by the end user for suitability.

#### Mechanical Properties<sup>8</sup>

Substrate	DP8805NS Green	
Tensile modulus (GPa)	0.97	
Tensile strength (MPa)	12.5	
Tensile strain at break (%)	8.5	

<sup>8.</sup> Tensile properties measured using ASTM D638; adhesives allowed to cure for 2 weeks at room temperature; 1/8" thick Type I test specimens; samples pulled at 0.2 in/min.

#### Floating Roller Peel (N/25mm width)9

Substrate	DP8805NS Green	
Aluminium	4.4 CF	

9. Floating roller peel values measured using ASTM D3167; adhesives allowed to cure for 24 hours at room temperature; 1" wide samples; 0.017" bond line thickness; samples pulled at 6 in/min; aluminium surfaces etched; substrates used were 1/16" thick and 0.020" thick aluminium: failure modes:

 SF: substrate failure

Note: The data in this sheet were generated using the 3M™ EPX™ Applicator System equipped with an EPX static mixer, according to manufacturer's directions. Thorough hand-mixing will afford comparable results.

#### Environmental Resistance<sup>10</sup>

Condition	Substrate	DP8805NS Green
149℃		100%
49℃ + 80% relative humidity	Aluminium	70%
85℃ + 85% relative humidity		40%
Water		90%
Salt water (5 wt% in water)		100%
Diesel fuel		100%
Motor oil		100%
Antifreeze (50 wt% in water)		90%
Isopropyl alcohol		50%
Bleach (10 wt% in water)		65%
49℃ + 80% relative humidity	PVC	100%
Water		100%
Salt water (5 wt% in water)		100%
Sulphuric acid (16 wt% in water)		100%
Sodium hydroxide (10 wt% in water)		90%

<sup>10.</sup> Values indicate overlap shear test performance retained after 1,000 hours of continuous exposure relative to a control sample left at room temperature; samples conditioned for 24 hours at room temperature and 50% relative humidity prior to tests; "NT" = not tested yet.

Note: Fully-cured Low Odour Acrylic Adhesives can withstand short-term incidental contact with almost any solvent, chemical, or environmental condition. However, long-term continuous exposure to the following liquids should be avoided:

- 1. Elevated temperature (>37℃) water
- 2. Ketone-type solvents (acetone, MEK)
- 3. Gasoline and similar liquids

#### **Directions For Use**

1. To obtain the highest strength structural bonds, paint, oxide films, oils, dust, mould release agents, and all other surface contaminants must be completely removed. The amount of surface preparation depends on the required bond strength and environmental aging resistance desired by user. For suggested surface preparations on common substrates, see the section on surface preparation.

2. Mixing

#### For Duo-Pak Cartridges

Store cartridges with cap end up allowing any air bubbles to rise towards the tip. To use, simply insert the cartridge into the EPX applicator and start the plunger into the cylinders using light pressure on the trigger. Then remove the cap and expel a small amount of adhesive to ensure material flows freely from both sides of cartridge. For automatic mixing, attach an EPX mixing nozzle to the cartridge and begin dispensing the adhesive. For hand mixing, expel the desired amount of adhesive and mix thoroughly. Mix approximately 15 seconds after obtaining a uniform colour.

#### For Bulk Containers

Mix thoroughly by weight or volume in the proportion specified on the product label or in the typical uncured properties section. Mix approximately 15 seconds after obtaining a uniform colour. 3. Apply adhesive and join surfaces within the open time listed for the specific product.

Larger quantities and/or higher temperatures will reduce this working time

- 4. Allow adhesive to cure at  $16 \, {\rm C}$  or above until completely firm. Applying heat up to  $66 \, {\rm C}$  will increase cure speed.
- 5. Keep parts from moving during cure. Apply contact pressure or fixture in place if necessary. Optimum bond line thickness ranges from 0.005 to 0.020 inch; shear strength will be maximized with thinner bond lines, while peel strength reaches a maximum with thicker bond lines.
- 6. Excess uncured adhesive can be cleaned up with ketone type solvents.\*

\*Note: When using solvents, extinguish all ignition sources, including pilot lights, and follow the manufacturer's precautions and directions for use.

#### **Surface Preparation**

 $3M^{\text{TM}}$  Scotch-Weld<sup>TM</sup> Acrylic Adhesives are designed to be used on metal, wood and most plastic surfaces. The following cleaning methods are suggested for common surfaces:

#### Steel:

- 1. Wipe free of dust and dirt with pure solvent such as acetone or isopropyl alcohol.\*
- 2. Sandblast or abrade using clean fine grit abrasives.
- 3. Wipe again with clean solvent to remove loose particles.\*
- 4. When using a primer, apply within 4 hours after surface preparation.

#### Aluminium:

- 1. Wipe free of dust and dirt with pure solvent such as acetone or isopropyl alcohol.\*
- 2. Sandblast or abrade using clean fine grit abrasives.
- 3. Wipe again with clean solvent to remove loose particles.\*

#### Plastics/Rubbers:

- 1. Wipe with isopropyl alcohol.\*
- 2. Abrade using fine grit abrasives.
- 3. Wipe with isopropyl alcohol.\*

#### Glass:

- 1. Solvent wipe surface using acetone or MEK.\*
- 2. Apply a thin coating of a silane adhesion promoter to the glass surfaces to be bonded and allow to dry completely before bonding.

\*Note: When using solvents, extinguish all ignition sources, including pilot lights, and follow the manufacturer's precautions and directions for use.

Storage	Store product at 27℃ or below. Refrigeration at 4° C will help extend shelf life. Do not freeze. Allow product to reach room temperature prior to use.		
Shelf Life	3M <sup>™</sup> Scotch-Weld <sup>™</sup> Low Odour Acrylic Adhesives have a shelf life of 18 months in unopened original containers kept at recommended storage conditions.		
Precautionary Information	Refer to product label and Material Safety Data Sheet for health and safety information before using the product. For information please contact your local 3M Office.  www.3M.com		
For Additional Information	To request additional product information or to arrange for sales assistance, call 0870 6080050 Address correspondence to: 3M United Kingdom PLC, 3M House, 28 Great Jackson Street, Manchester, M15 4PA		
Important Notice	All statements, technical information and recommendations contained in this document are based upon tests or experience that 3M believes are reliable. However, many factors beyond 3M's control can affect the use and performance of a 3M product in a particular application, including the conditions under which the product is used and the time and environmental conditions in which the product is expected to perform. Since these factors are uniquely within the user's knowledge and control, it is essential that the user evaluate the 3M product to determine whether it is fit for a particular purpose and suitable for the user's method or application. All questions of liability relating to this product are governed by the terms of the sale subject, where applicable, to the prevailing law
